The sample consisted of 432 male inmates who were released from Maryland State prisons in the early 1970s. These men were followed for one year (52 weeks) after their release, and the dates of any arrests were recorded. We’ll only look at the first arrest here.

WEEK is the week of the first arrest after release.
ARREST equals 1 for those arrested during the 1-year follow-up and 0 for those who were not.
FIN equals 1 if the inmate received financial aid after release and 0 otherwise.
Half of them were randomly assigned to each category.
AGE specifies age in years at the time of release.
RACE equals 1 if the person was black and 0 otherwise.
WEXP equals 1 if the inmate had full-time work experience before incarceration and 0 otherwise.
MAR equals 1 if the inmate was married at the time of release and 0 otherwise.
PARO equals 1 if the inmate was released on parole and 0 otherwise.
PRIO specifies the number of convictions an inmate had prior to incarceration.
